EN-2

To Ensure Long-Lasting Performance,

- **PLEASE AVOID Using Any Soap or Cleaners:** Please use only clean water for rinsing. Soaps and detergents will clog the mat's surface and ruin its ability to absorb water.
- **PLEASE AVOID Placing Heavy Items:** Please do not exceed the 30kg (66 lbs) weight limit. If your mat warps, a simple rinse and leaving it upside-down overnight should help.
- **PLEASE AVOID Contact with Colored Liquids:** Please keep all colored liquids well away from the mat. Spills are very likely to leave permanent, non-removable stains.

Quick Care Note:

To keep your mat in top shape, remember that a quick rinse or wipe is all it needs. Avoid soaking it in water, as this can affect its drying performance overtime.

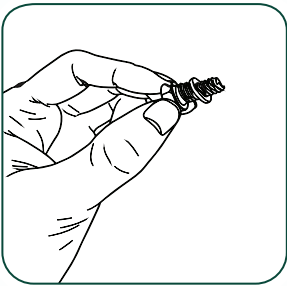

First Time Setup:

- **Step 1:** Rinse with water and wipe with a damp cloth to remove any harmless, natural dust from production.

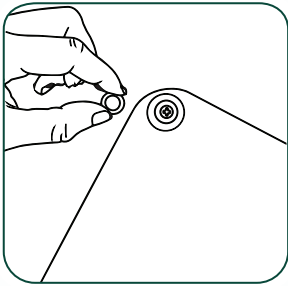

EN-3

- **Step 2:** Attach the non-slip legs (see Assembly Guide below).
- **Step 3:** You're ready to dry your dishes eco-friendly and confidently!

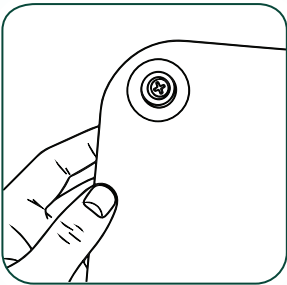

Non-Slip Legs Assembly:

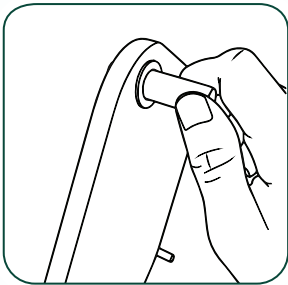

1. Place one rubber gasket on each bolt head.

2. Insert the bolt down through the top of the mat.

3. Place another gasket on the bolt's end.

4. Then screw on the support the leg.

EN-4

What is Diatomite?

A natural, fossilized algae material. It's food-safe, super absorbent, dries quickly, heat-resistant, and eco-friendly. Perfect for drying dishes.

Stain Prevention is Key:

To keep your mat looking its best, we strongly recommend preventing contact with colored liquids such as coffee, tea, soy sauce, dark vinegar, ketchup, and chili oil.

If a spill occurs, act quickly:

1. Immediately rinse the area with clean water.
2. Gently sand the stained area with the provided sandpaper while it is damp.
3. Brush away all dust and residue.

Please Note:

Even with prompt cleaning, some staining may remain. For the longevity of your mat, do not soak it in water or use any detergents, especially strong acids or alkalis.

These harsh chemicals can permanently damage the mat's porous structure, reducing its absorbency and drying performance.
